SUMMARY

Full-stack Software Developer with 4 years of experience as a company's sole developer, building Angular/Ionic mobile and web apps and extending the iDempiere ERP with Java plugins, model events, callouts, and custom windows. Delivered a field-operations app used across 150 branches, a warehouse inventory app, and a full HR/payroll system for 250 employees, owning work from UI and REST APIs to ERP customization and Android/desktop deployment.

EXPERIENCE

Software Developer (Full-time)

Rampiere IT Solutions Inc.

October 2022 – September 2026

Alabang, Muntinlupa City, Philippines

- **Served** as the company's sole software developer across 10 projects, responsible for requirements, development, Git version control, self code review, manual QA testing, and releases (signed Android APKs, iDempiere plugin deployment to the server, and web builds published through cPanel), owning every client system end to end

SOAR+ Next | Angular 19, Ionic 8, Capacitor

- **Built** a field-operations mobile app used across **150 branches** of a food distribution client, covering sales orders (walk-in, Grab, Foodpanda), expenses and bank deposits, physical inventory, branch-to-branch product transfers, requisitions, and sold-out reports, enabling branches to post daily transactions to the ERP from their phones
- **Implemented** separate logins and workflows for crew, driver, and warehouse accounts, including driver transfers and warehouse picklist/packlist and shipment confirmation, ensuring each role only sees its own steps and data
- **Added** PDF confirmations with photos and sender/receiver signatures, push notifications, and admin-protected sales, expense, inventory, and requisition templates, giving the client signed proof of every transfer and faster daily encoding
- **Maintained** a franchise-specific variant on a shared core codebase, delivering franchise store features without duplicating development effort

MH Inventory | Angular 19, Ionic 8, Capacitor

- **Developed** a mobile warehouse app for **2 warehouses** covering physical counts with barcode/camera scanning, inventory verification, stock transfers, purchase orders, material receipts, shipments, requisitions, internal-use issues, and returns to supplier, replacing paper-based counts and transfer slips
- **Built** a generate flow that creates consolidated pick/pack lists from the ERP and prints them as one combined PDF matching the company's existing paper format, so warehouse staff switched over without retraining
- **Added** offline caching with later sync, a dashboard with Excel-exportable reports, and in-app updates, allowing staff to keep working without signal and always run the latest version

Paypiere | Angular 14, Ionic 8, Capacitor, JasperReports

- **Developed** a full HR and payroll system for **250 employees**, covering payroll definitions, salary scales, deductions, loans, adjustments, and payroll processing, giving HR one system for every payroll run
- **Built** timesheet and scheduling tools (shift planner, timesheet import and batch processing, late, undertime, and invalid-timesheet reports), reducing manual attendance checking before each cutoff
- **Generated** government reports and documents (SSS, PhilHealth, and Pag-IBIG alphas, BIR forms, taxes withheld) and Jasper payslips, helping HR meet compliance deadlines without spreadsheets
- **Built** the Paypiere employee mobile app for camera and GPS clock-in, schedules, payslips, and leave, loan, reimbursement, and workday requests, with opt-in live location for a supervisor map, moving employee requests off paper

iDempiere ERP | Java, iDempiere 12 (OSGi Plugins), Application Dictionary, PostgreSQL

- **Developed 5** custom OSGi plugins in Java that extend iDempiere for client operations, responsible for packaging business logic as separate plugins, adding features without modifying the ERP core and keeping upgrades safe
- **Implemented** model event handlers and callouts that validate data and auto-fill fields as users enter and save records, reducing encoding errors and keeping ERP data consistent across branches
- **Created 4** custom windows with their tables, tabs, and fields through the Application Dictionary, such as expense records, SOAR templates, and employee location tracking, giving users ERP screens built around each client's process

iDempiere REST API | Java, Jersey (JAX-RS), JWT, OpenAPI/Swagger

- **Developed** two REST API plugins with **40+** endpoint modules, JWT security, and Swagger docs, serving as the backend for the SOAR+ Next, MH Inventory, Dashboard KPI, and Paypiere apps, so every app reads and writes live ERP data
- **Built** payroll, timesheet import, scheduled process, and attendance endpoints, including night-shift grouping across midnight and invalid-timesheet checks, giving HR accurate attendance for each payroll run
- **Integrated** Firebase push notifications, email notifications, and supervisor-scoped live location endpoints, keeping branch staff, HR, and supervisors informed without manual follow-up

Dashboard KPI | Angular 19, Ionic 8, Chart.js

- **Developed** a branch-level KPI dashboard on iDempiere data with an overview page and drill-down reports for Sales, Labor, Inventory, Purchasing, and Profitability, plus sales-per-man-hour and financial KPIs, giving company users one view of performance for one or all branches
- **Defined** the KPI formulas and iDempiere data mapping, and **added** trend charts, a branch switcher, and Excel export, letting managers compare periods and share figures quickly

Rampiere POS | Angular 19, Ionic 8, Capacitor, Electron, Node.js WebSocket

- **Developed** the sales, cash drawer, kitchen screen, customer display, queueing display, inventory, and report modules with employee/manager/admin roles, plus a back-office dashboard for products, branches, employees, and analytics
- **Built** a Node.js WebSocket server with per-branch rooms and **integrated** Xendit, GCash, thermal printers, and cash drawers for Android and Windows, so kitchens receive paid orders instantly on existing store hardware

Qota Pay | Angular, Xendit, PayMaya

- **Developed** a subscription portal with corporate and service-provider sign-up, plans, and payment links through Xendit and PayMaya, allowing companies to subscribe and pay online

Biometrics Verification App | Ionic, Capacitor, ML Kit

- **Built** a time-entry app with QR scanning, device biometrics, camera, and GPS, plus offline time entries and timesheets, allowing employees to log time only after verifying who and where they are, even without signal

Internal Tools | n8n, Node.js, Express, OpenAI API

- **Automated** team alerts with n8n, set up an Express dev proxy, and **integrated** an OpenAI chatbot into an internal dashboard, reducing manual status checks

Front-End Developer Intern

July 2022 – August 2022

ICargo Pacific, IT Department

- **Developed** the company's Merchant Interface Website, giving merchants a dedicated online portal
- **Integrated** company APIs into the website, letting merchants view live information

SKILLS

Frontend: Angular (v14–19), TypeScript, JavaScript, HTML/CSS, Bootstrap, RxJS

Mobile & Desktop: Ionic, Capacitor (Android/iOS), Electron

Backend & APIs: Node.js, Express, WebSocket, Java (JAX-RS/Jersey, Maven), REST API design, OpenAPI/Swagger, JWT authentication, reverse proxy servers

ERP: iDempiere 12 (OSGi plugins, model events, callouts, Application Dictionary tables & windows, REST API plugins, PostgreSQL)

Payments & Messaging: Xendit, PayMaya SDK, GCash QR, Firebase Cloud Messaging

Automation & Reporting: n8n workflow automation, JasperReports, Chart.js, ngx-charts, pdfmake, jsPDF, Excel export

Hardware Integration: Thermal printers, cash drawers, Bluetooth LE, Web Serial API, barcode/QR scanning (ML Kit), GPS, device biometrics

AI: AI chatbot integration, OpenAI API, other LLMs (familiar)

Other Tools: Git, PostgreSQL, cPanel, PHP, Python (familiar), basic networking

Operating Systems: Windows, Ubuntu, Debian; virtual machines (VirtualBox, VMware)

Certification: Complete Web Development, Programming Hero (September 2022)

Languages: English, Filipino

EDUCATION

Bachelor of Science in Computer Science

2018 – 2023

Emilio Aguinaldo College – Cavite, Philippines

- Honors: Merit Scholar, 2nd Semester 2021; Varsity Scholar, AY 2018–2022
